### Introduction:

Hunger for Gold is a mining simulation game, where the player controls a machine and try to collect as many minerals as possible.

### Aim of the Game:

The main objective of the game is to survive, while trying to get points to upgrade parts of the drill, so that surviving is easier.

### Platform:

Windows desktop application

### Target audience:

Our game is suitable for people of all ages , best range from 7 to 99+ , those who are interested in a gem-gathering simulation game.

### Game play:

The player to collect minerals by moving the machine with WASD keys. Upgrading an element needs a fixed score of 5000. If the player upgrades an element, then the score is subtracted from the Total Points. You can upgrade the drill's speed, storage, and fuel tank.

When the machine collects any of the gems, then points are added to the Actual Points. There are three type of gems: gold, silver, and bronze. Collecting minerals uses space in the storage of the machine, when it is full then no gems can be collected. The movement of the drill uses fuel so if it runs out then you will lose. Be careful with the ghosts and bombs, they will move across the map from one side all the way to the other side, and the bombs will explode every 5 seconds and will appear randomly.

### How to control your drill :

You can move your awesome drill by using WASD keys. Press F1 to upgrade the drill's speed. Press F2 to upgrade the storage. Press F3 to upgrade the capacity of the fuel.
